

DEVOPS MASTER COURSE

Final Release Handbook

Master index, packaging model, learning journey and release operations

Edition	2026 Final Release
Curriculum	Volumes 1-15
Delivery	DOCX + PDF + Executable Repository

Professional learning, practical evidence, enterprise readiness.

Executive Summary

The DevOps Master Course is consolidated as a fifteen-volume, beginner-to-master curriculum. This handbook defines the canonical release structure, learning sequence, evidence model, completion rules, and package organization. It is designed to make the course usable as a self-study program, team enablement program, interview-preparation track, or enterprise academy.

Release outcome: The curriculum content is complete through Volume 15. The implementation package adds executable labs, assessments, capstone assets, progress tracking, quality controls, and a sustainable update process.

1. Final Package Contents

Asset	Purpose	Primary user
Final Release Handbook	Master index and operating instructions	Learners, trainers, administrators
Labs, Assessments and Capstone Manual	Practical execution and scoring system	Learners and reviewers
Progress Tracker and Evidence Workbook	Completion, scores and evidence management	Learners and mentors
Quality Audit and Versioning Manual	Release controls, audit and updates	Course owner and maintainers
Executable Lab Repository	150 labs, starter kits, assessment banks and scripts	Hands-on learners

2. Canonical Curriculum Index

Volume	Canonical specialization	Level progression	Practical coverage
Volume 1	Linux and DevOps Foundations	Beginner -> Professional -> Master	10 practical domains
Volume 2	Linux Administration, Shell Scripting and Troubleshooting	Beginner -> Professional -> Master	10 practical domains
Volume 3	Git, GitHub and Collaborative Development	Beginner -> Professional -> Master	10 practical domains
Volume 4	Networking, Web Infrastructure and Security Foundations	Beginner -> Professional -> Master	10 practical domains
Volume 5	Python Automation for DevOps	Beginner -> Professional -> Master	10 practical domains
Volume 6	Containers and Docker Engineering	Beginner -> Professional -> Master	10 practical domains
Volume 7	Kubernetes Administration and Application Delivery	Beginner -> Professional -> Master	10 practical domains
Volume 8	Infrastructure as Code and Configuration Management	Beginner -> Professional -> Master	10 practical domains
Volume 9	Cloud-Native CI/CD Foundations	Beginner -> Professional -> Master	10 practical domains
Volume 10	Advanced CI/CD, GitOps and DevSecOps	Beginner -> Professional -> Master	10 practical domains
Volume 11	Observability and Site Reliability Engineering	Beginner -> Professional -> Master	10 practical domains

Volume	Canonical specialization	Level progression	Practical coverage
Volume 12	Multi-Cloud and Enterprise Cloud Architecture	Beginner -> Professional -> Master	10 practical domains
Volume 13	Platform Engineering and Internal Developer Platforms	Beginner -> Professional -> Master	10 practical domains
Volume 14	DataOps, MLOps, AI Infrastructure and LLMOps	Beginner -> Professional -> Master	10 practical domains
Volume 15	DevOps Leadership, Enterprise Transformation and Final Mastery	Beginner -> Professional -> Master	10 practical domains

3. Part Structure and Learning Pattern

Where a volume is divided into six parts, the standard pattern is:

Part	Purpose	Expected learner outcome
A	Foundations	Understand terminology, architecture and basic operations
B	Core engineering	Build reliable implementations using standard workflows
C	Advanced engineering	Design reusable, automated and scalable solutions
D	Production operations	Operate, troubleshoot, secure and recover systems
E	Enterprise scale and governance	Apply policy, cost, compliance and multi-team controls
F	Projects, interviews and capstone	Demonstrate integrated mastery and communication

4. Learning Journey

1. Read the chapter and summarize the architecture in your own words.
2. Complete the associated lab in an isolated environment.
3. Capture commands, outputs, diagrams, test results and cleanup evidence.
4. Complete the knowledge and scenario assessment.
5. Explain the design in an interview-style review.
6. Record scores and evidence in the progress workbook.
7. Advance only when the required acceptance threshold is met.

5. Competency Levels

Level	Knowledge	Practical ability	Evidence standard
Beginner	Explains concepts and commands	Completes guided labs	Commands, outputs and basic validation
Professional	Compares design alternatives	Builds and troubleshoots independently	Automated tests, failure drill and runbook
Master	Designs enterprise systems	Leads incidents, migrations and governance	Architecture decisions, SLOs, risk and measurable outcomes

6. Evidence-First Completion Rules

- A chapter is read when the learner can explain its architecture and failure modes.
- A lab is complete only after functional validation, security review, failure recovery and cleanup.
- A part is complete when knowledge, practical and interview scores each meet the threshold.
- A volume is complete when all required parts are passed and the volume project is demonstrated.
- Course graduation requires the final capstone, mastery portfolio and release-quality documentation.

7. Recommended Study Cadence

Cadence	Weekly commitment	Estimated completion	Best for
Focused	18-25 hours	12-18 months	Career transition or full-time study
Professional	8-12 hours	20-30 months	Working professionals
Sustainable	4-6 hours	30-42 months	Long-term mastery with job commitments

8. Final Release Folder Structure

9. Administration and Mentoring Model

- Learner owns execution, evidence and reflection.
- Reviewer validates reproducibility, safety and engineering judgment.
- Mentor focuses on misconceptions, trade-offs and interview communication.
- Course administrator maintains releases, errata, links and audit results.

10. Graduation Definition

Graduated learner: Can design, build, secure, observe, operate, troubleshoot and improve an enterprise delivery platform; can communicate decisions to engineers, security teams, management and executives; and can demonstrate the work through reproducible evidence.
