

DEVOPS MASTER COURSE

Quality Audit, Versioning and Update Policy

Release assurance, file integrity, errata and sustainable curriculum maintenance

Edition	2026 Final Release
Curriculum	Volumes 1-15
Delivery	DOCX + PDF + Executable Repository

Professional learning, practical evidence, enterprise readiness.

Executive Summary

This manual defines how the course is audited, published, corrected and updated. It separates curriculum completion from file availability, verifies DOCX/PDF pairing, protects against broken downloads and duplicate content, and creates an update path that does not require unnecessary new volumes.

1. Quality Gates

Gate	Required check	Failure action
Content	Chapter sequence, scope and no unintended duplication	Correct source manuscript
Technical	Commands, configurations and examples are internally consistent	Revise and re-test
DOCX layout	Render every page; no clipping, broken tables or missing glyphs	Fix and re-render
PDF layout	Render and visually verify; selectable text and embedded fonts	Re-export and preflight
Pair integrity	Every DOCX has a matching PDF with the same stem	Regenerate missing pair
Links	Download and reference links resolve	Replace or annotate
Accessibility	Headings, table headers, readable contrast and meaningful link text	Apply safe fixes
Privacy	No sensitive metadata, credentials or private paths	Scrub before release

2. Current-Workspace Audit Scope

At build time, the active workspace contained 33 course DOCX files and 33 matching course PDF files. This count reflects files available in the current runtime, not the full historical library across previous conversations or storage locations.

Important distinction: Curriculum status may be complete while older files are not mounted in the current workspace. The included audit script reports file availability without incorrectly declaring missing historical files as unwritten content.

3. Automated File Audit

```
python scripts/audit_course_files.py --root /path/to/course-library --json-out audit.json
```

Checks:

- DOCX count
- PDF count
- DOCX files without matching PDFs
- PDF files without matching DOCX files

4. Release Naming Standard

DevOps_Master_Course_Volume_<NN><Part>_<Canonical_Title>_v<MAJOR>.<MINOR>.<PATCH>.docx
 DevOps_Master_Course_Volume_<NN><Part>_<Canonical_Title>_v<MAJOR>.<MINOR>.<PATCH>.pdf

Examples:

DevOps_Master_Course_Volume_11B_Prometheus_PromQL_Alertmanager_v1.0.0.pdf

DevOps_Master_Course_Volume_14D_Model_Serving_RAG_Agents_LLMops_v1.1.0.docx

5. Version Policy

Change	Version increment	Example
Typo, broken link, formatting defect	PATCH	1.0.0 -> 1.0.1
New lab, changed tool workflow, expanded chapter	MINOR	1.0.1 -> 1.1.0
Major restructure or incompatible learning sequence	MAJOR	1.1.0 -> 2.0.0

6. Errata Workflow

1. Record the issue with volume, part, chapter, page and evidence.
2. Classify severity: critical, high, medium or editorial.
3. Verify the correction against authoritative documentation or reproducible tests.
4. Update the source DOCX and companion repository asset.
5. Render and visually verify DOCX and PDF again.
6. Increment the version and update the changelog.
7. Publish the corrected files and archive the replaced release.

7. Technology Update Cadence

Review	Cadence	Focus
Critical advisory review	As needed	Security, deprecations and broken workflows
Quarterly maintenance	Every 3 months	Links, versions and lab compatibility
Annual edition review	Once per year	Architecture changes, new standards and roadmap
Major curriculum review	Every 2-3 years	Structure, learning outcomes and market relevance

8. Update Decision Framework

- Update an existing chapter when the learning outcome is unchanged.
- Add an appendix or lab when a new tool is an alternative implementation.
- Add a minor section when a new standard changes production practice.
- Create a new part only when the topic requires a coherent multi-chapter learning track.
- Create a new volume only when the domain is materially distinct and cannot fit the existing roadmap.

9. Release Checklist

Release check	Pass	Reviewer note
All expected files present	☐	
DOCX/PDF pairs have identical stems	☐	
Every DOCX rendered and inspected	☐	
Every PDF rendered and inspected	☐	
No blank spill pages	☐	
No clipped code or tables	☐	
Page numbering and headers correct	☐	
Hyperlinks and references checked	☐	
Accessibility audit reviewed	☐	
Metadata and sensitive information scrubbed	☐	
Repository validation passes	☐	
ZIP opens and contains expected assets	☐	
Checksums recorded	☐	
Changelog and version updated	☐	
Archive copy retained	☐	

10. Final Implementation Status

Implementation item	Status	Delivered artifact
Master course index	Implemented	Final Release Handbook
Hands-on lab repository	Implemented	150 lab guides and starter kits
Assessment system	Implemented	15 banks, rubrics and exam model
Capstone package	Implemented	Requirements, risks, acceptance and runbooks
Progress tracker	Implemented	Workbook plus CSV trackers
Quality audit	Implemented	Manual and automated audit script
Version/update system	Implemented	Version policy, errata and cadence
